DETAILED ACTION

Response to Claim Changes

1. The Examiner acknowledges Applicant's amendments to claims 1 and 19-46 to better specify the present invention. Claims 1-46 are allowable.

Response to Arguments

2. Applicant's arguments, filed 2/7/05, with respect to the current rejection, wherein the prior art used "LiveWire Developer's Guide", herein referred to as LiveWire, does not contain distinct components such as a client side proxy have been fully considered and are persuasive. The rejection of claims 1-46 has been withdrawn. The amendments to the independent claims include the addition of client-side data manager, client-side proxy, server-side data query engine and server-side proxy has deemed these claims allowable over the existing prior art. Although, components similar to a client-side data manager, a server-side proxy and a server-side data query engine has been referred to in the reference LiveWire, the reference does not lay out a distinct steps that are carried out by each of the components mentioned as per the present independent claims. Furthermore, the reference does not clearly teach the presence of a client-side proxy, with this component carrying out the detailed steps taught in the present independent claims.

Allowable Subject Matter

3. Claims 1-46 are allowed. The following is an examiner's statement of reasons for allowance:

With respect to independent claims 1, 20 and 39, LiveWire discloses editing a data structure of HTML UI control in a client-server networked environment. LiveWire works within

Art Unit: 2173

the client server network to carry out the processes needed to display the HTML UI control, make a query request involving the HTML UI control, wherein the control can be manipulated and data can be further accessed from an information system such as a database. LiveWire does not disclose distinct components such as client-side data manager, server-side query manager and server-side proxy, even though the reference does make references to some processes that are carried out through means similar to these components. But LiveWire does not in detail teach the steps taught in the claims with a distinct layout as to the specific steps that each component is responsible for carrying out. Furthermore, LiveWire does not disclose a client-side proxy, nor provide motivation as to how a client-side proxy would have been an obvious inclusion in the system of LiveWire. In addition, the client-side proxy of the present claims further lays out distinct steps that are to be carried out by this component.

Since claims 2-19,21-38 and 40-46 depend on claims 1, 20 and 39 and include all of the limitations of these claims, claims 2-19,21-38 and 40-46 are considered allowable for the reasons in which claims 1, 20 and 39 are allowable.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

Conclusion

4. The prior art made of record on form PTO-892 and not relied upon is considered pertinent to applicant's disclosure. The prior art teaches a method retrieving and editing data structure of a HTML UI control.
